

## Backup Exec 12.5 for Windows Servers

### BACKUP EXEC 12.5 FOR WINDOWS SERVERS

Symantec Backup Exec™ 12.5 for Windows® Servers is the gold standard in Windows data protection for physical and virtual systems, providing complete disk and tape backup and recovery support for Windows-based environments including the latest Windows Server 2008 portfolio. Continuous data protection and patent-pending granular recovery technology delivers reliable point in time recovery for critical Microsoft applications and ensures individual Exchange emails, SharePoint documents and Active Directory user profiles can be restored in seconds.

Critical business data is easily secured, backed up and archived through cross-platform integration with other market-leading Symantec solutions. Scalable management and heterogeneous storage protection is delivered through a single Backup Exec console.

#### Agents and Options\*

Backup Exec Agents and Option enhance and extend platform and feature support for Backup Exec Environments. Whether you need to protect critical Microsoft applications, virtual servers or non-Microsoft Operating systems, Backup Exec 12.5 for Windows Servers has an expansive portfolio of high powered Agents and Options to scale and grow a Backup Exec environment. Contact your Symantec sales rep or authorized channel partner for complete details.

*\*Advanced Open File Option (AOFO) and Intelligent Disaster Recovery Option (IDRO) are now included with each core Backup Exec 12.5 license and with each Agent for Windows Systems providing complete out-of-the-box data protection.*

### KEY MESSAGES

- Delivering complete data protection to over 1.5 million Windows-centric customers
- Comprehensive data protection for physical and virtual servers through a single console
- Scalable heterogeneous protection through remote agents
- Recovery of critical data in seconds with patent-pending Granular Recovery Technology (GRT)
- Integration with market-leading products to secure, backup and archive critical data
- Protect business revenue, resources and brand reputation
- Efficient automated data protection

### WHAT'S NEW IN BACKUP EXEC 12.5 FOR WINDOWS SERVERS?

**NEW Granular Data Recovery for VMware Infrastructures and Microsoft Virtual Servers** – Delivers expanded virtual server data protection with two new virtual Agents – Backup Exec Agent for VMware Virtual Infrastructures and Backup Exec Agent for Microsoft Virtual Servers (including Hyper-V).

**Expanded Granular Recovery benefits for SharePoint Backup** – The Exec Agent for SharePoint now provides new flexibility to restore SharePoint documents, sites and list items from a single pass backup.

**NEW Market Leading Data Protection for the Complete Microsoft Windows 2008 Server Portfolio** – Offers complete data protection for the latest Windows Server 2008 portfolio including Windows Server 2008, Windows Small Business Server 2008, new Essential Business Server 2008 and SQL 2008 databases.

**NEW Backup Exec Infrastructure Manager powered by Altiris** – Allows administrators to easily inventory an existing Backup Exec environment to quickly locate both protected and unprotected systems, deploy new Backup Exec components to unprotected systems and easily upgrade existing Backup Exec components to the latest version.

**Enhanced protection for NDMP enabled NAS devices** – Now protects NDMP configurations directly attached to the media server and in remote locations including Storage Area Network (SAN) environments.

**NEW Remote Media Server Agent for Linux Servers** – Delivers enhanced Linux server data protection with new support for direct attached storage configurations for remote Linux server.

**And much more!** Symantec QuickStarts and Data Sheets are available with additional comprehensive feature and benefit documentation.

### KEY CONTINUING CAPABILITIES

- Reliable, trusted data protection for Windows-based businesses including optimized support of Microsoft Windows Server 2008.
- Simplified management of multiple consoles, delivering integrated security, backup and archive functionality.
- Restores individual Exchange messages, SharePoint documents, and Active Directory items from a single pass backup.
- Innovative multi-product integration with market leading technologies delivering integrated security, backup and archive functionality, further providing complete data protection for growing businesses.
- Continuous data protection for Exchange, SQL, file servers and desktops and laptops ensures backup jobs are continuously protected allowing businesses to restore data back to virtually any point in time.
- The Backup Exec portfolio of high powered Agents and Options extends data protection to non-Microsoft environments, enhances backup and storage configurations and centralized management options.
